# Capalnstaller OS Deployment

Version 5.6

Capalnstaller OS Deployment helps lower total cost of ownership by helping you configure, deploy and maintain Microsoft Windows operating systems. Basically, it helps IT organizations reduce support time and minimize administration costs.

#### What is CapaInstaller OS Deployment?

Capalnstaller OS Deployment is a solution for deploying Windows client and server operating systems in a managed network environment. For initial deployment, simply boot the computer using UEFI, PXE or other boot media and enter a computer name. The operating system is then automatically installed from an image on the network without requiring any further user input.

#### **A Comprehensive Configuration Tool**

To manage your deployments use Capalnstaller OS Deployment. This powerful tool enables the operator to create and manage OS Deployment Points that include a full Windows image, plus all of the required drivers for each computer model in use at the organization. The tool also helps the operator to configure computer models and synchronize deployment servers across the organization.

## **Remote Reinstallation Service**

It is easy to reinstall the operating system at any time using the CapaInstaller Management Console on any computer. Reinstallation is often the most fast, sure and safe way to restore normal service, e.g. fixing software related problems on a malfunctioning computer. The alternative, trying to isolate and correct a problem, is often very time consuming and many still result in a system with problems. When using CapaInstaller OS Deployment, OS installation or reinstall typically takes about 10 minutes, depending on computer and network performance.

OS deployment in Capalnstaller Management Console.

#### Integrate with System Management Products

Naturally, it is recommend to use Capalnstaller, which offers the most thorough integration, but OS Deployment can be integrated with many thirdparty solutions.

When using Capalnstaller, OS Deployment integration features include:

#### Complete Remote Reinstall

Use the Capalnstaller Console to completely reinstall any computer in the network, including the OS and all applications, updates and hotfixes previously assigned to the same workstation.

#### CapaInstaller Agents Distribution

All required CapaInstaller Agent software can be included with the operating system, thereby ensuring that all clients are immediately prepared for management.

## Capalnstaller OS Deployment

Configuring an OS Deployment Point.

## **Change Management Support**

A unique feature of CapaInstaller OS Deployment is the support for change management with full history on all changes made during daily operations. Combined with the built-in scalability support customers can scale out to worldwide locations while maintaining full operational control of all components. OS Deployment also supports a strong implementation of a tiered change management environment to fully support recommendation in standards like ITIL.

## **Customer Business Value**

Capalnstaller OS Deployment offers the IT Department an out-of-the-box solution based on well defined processes. Operators will be more efficient with OS Deployment and targets for Service Level Agreements are more easily guaranteed. Problems related to deployment of new computer hardware models and down time caused by reinstallation of Windows are minimized, which result in higher end user productivity.

## **Microsoft Gold Certified Partner**

CapaSystems has been globally accredited as a Microsoft Gold Certified Partner.
