CapaPacks for CapaInstaller

The combination of CapaPacks and Capa-Installer puts you in the driving seat when it comes to security, creation and deployment of software packages. With CapaPacks you can skip the daily monitoring for new versions, security updates and patches for standard software, and you can completely avoid the time-consuming task of preparing downloaded software for deployment.

SECURITY UPDATES

During the last few years the number of issued security patches has escalated. A conservative estimate is that at least once a week there is a need for updating one or more standard software applications. Monitoring and managing new releases has become a time-consuming task. CapaSystems monitors releases of new versions, updates and patches for you and ensures that you are informed as soon as they are ready for download.

PREPARATION FOR DEPLOYMENT

Preparing downloaded software for deployment can be time-consuming. Because it is impossible to predict when vendors will release new versions, updates or patches, many custom-ers find that their software is not always fully up-to-date. CapaPacks gives you access to downloading pre-prepared software packages whenever a vendor releases a new version, update or patch.

YOUR ACCESS TO STANDARD SOFTWARE

CapaPacks for CapaInstaller makes it easy, cheap and safe for you to be up-to-date with the security updates and patches for your standard software.
